Feigenbaum is the Grace Murray Hopper Professor of Computer Science at Yale University, having previously worked at AT&T Bell Labs. Her research is in security, privacy, and computational complexity, and she co-invented the computer-security research area of trust management. At the Center for Discrete Mathematics and Theoretical Computer Science (DIMACS), Feigenbaum edited a book series, co-directed a summer program, and co-organized three special workshops. She was an invited speaker at the International Congress of Mathematicians (1998). She was named a Fellow of the ACM (2001) and of AAAS (2012). Feigenbaum received the Test of Time Award (2020) from the IEEE Symposium on Security and Privacy for a 1996 paper.

This poster is part of the EvenQuads project, which combines innovative mathematical card games with learning about amazing women mathematicians. The project celebrates the 50th anniversary of the Association for Women in Mathematics.
